Filtering transaction data

If you want to view transactions within a certain date range or time period, you can do so using the filter options in the Verofy® App.

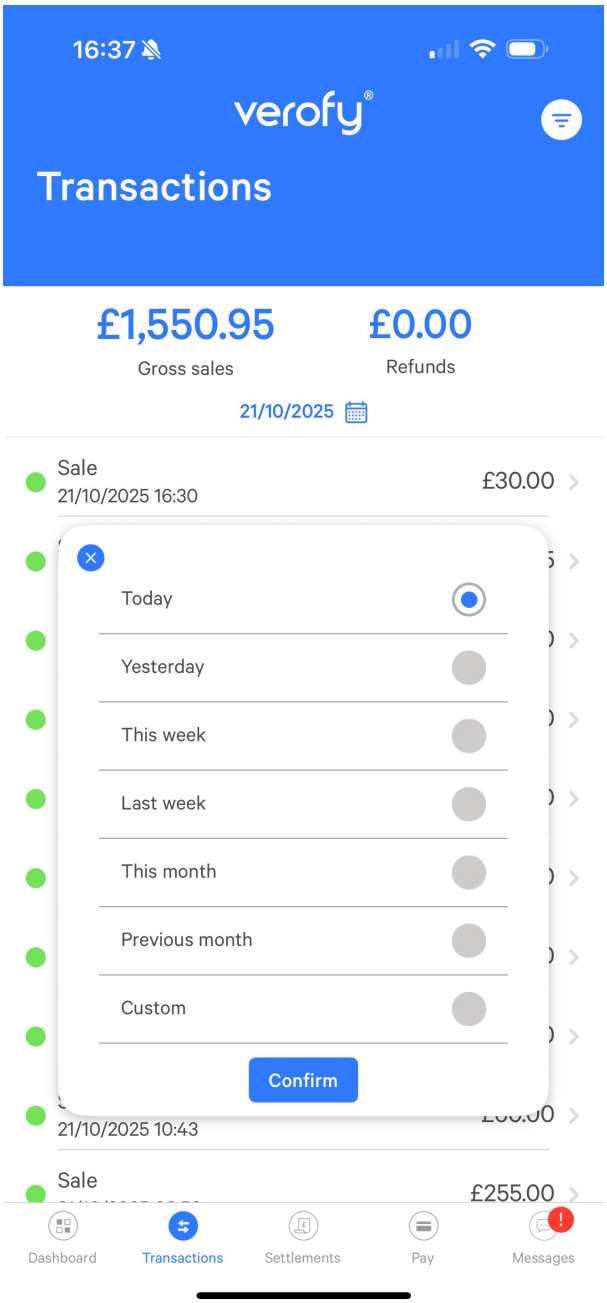

To begin, head to the **Transactions** option in the Verofy® App.

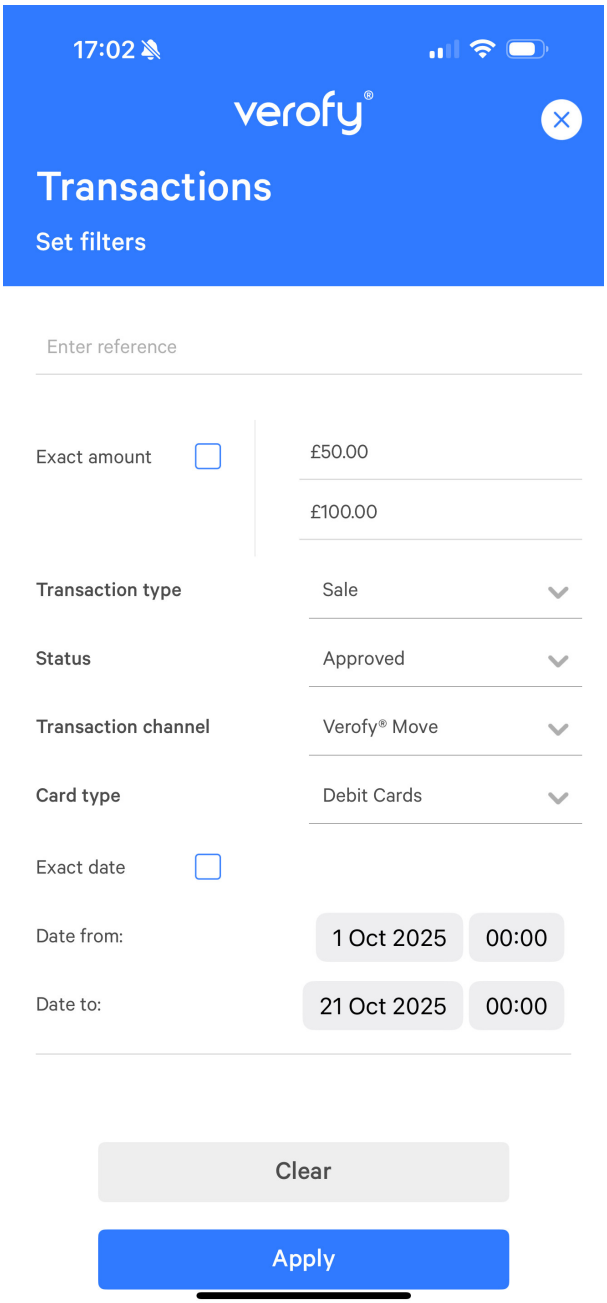

As default, the date range filter will be preset to the current day.

You can click the date with the calendar icon from this page to filter to a different date range. There are preset options to select or you can select your own custom range.

If you need your filtering to be more specific, you can press the **filter** button at the top right of the page to open up more filter options. From here, you can find transactions by searching by the transaction reference, by a specified or range amount, or by the transaction type, status, chanel and card type. You can also filter by a specific date, or between date ranges. In the example below, the user is looking for approved sale transactions between £50 and £100 taken on their Verofy® Move that were debit cards, between the 1st October and 21st October.

You can't currently export the filtered transactions from the Verofy® App., but you can do this from Verofy® Cloud. Click **here** to find out more.
